

## Table of contents

Abbreviations	p. 1
Chapter 1 The <i>abstract</i> and <i>concrete</i> aspects of speech sound perception	3
1.1 Introduction	3
1.2 The <i>abstract</i> phonological knowledge	3
1.2.1 Phonemes: mental sound representations	4
1.2.1.1 The notion of distinctive feature	5
1.2.1.2 The perceptual status of phonemes	6
1.2.2 Allophones: variants of phonemes	6
1.2.2.1 The perceptual status of allophones	6
1.2.3 Mapping of the speech signal onto abstract representations	7
1.2.4 Speech perception models based on the notion of distinctive feature	8
1.2.4.1 Analysis by Synthesis: K.N. Stevens	9
1.2.4.2 A speech perception model at the interface of neurobiology and linguistics	9
1.3 The <i>concrete</i> auditory system	10
1.3.1 Processing of the speech signal	11
1.3.1.1 Speech-specific auditory cortex regions	12
1.3.1.2 The role of auditory short-term memory	13
1.3.2 Models of the cortical basis of speech perception	14
1.3.3 Electrophysiological evidence of the role of auditory cortex	14
1.3.4 Cortical stages of speech perception	15
Chapter 2 Electrophysiological measures of speech perception	17
2.1 Introduction	17
2.2 Measuring Event-Related Brain Potentials (ERPs)	18
2.2.1 N100 component	19
2.2.1.1 N100 studies on tone <i>versus</i> speech sound perception	19
2.2.1.2 N100 studies on acoustic feature encoding in vowels	20
2.2.2 Mismatch negativity component	21
2.2.2.1 MMN an inseparable part of the N100 response?	22
2.2.2.2 MMN and sensory memory	23
2.2.2.3 MMN phonological interpretations and long term memory	23
2.2.2.4 MMN studies on phonemic and subphonemic perception	24

Chapter 3 Acoustic analysis of the <i>Tricase</i> vowel system	27
3.1 Tricase vowel system	27
3.1.1 Metaphonic process of the Tricase variety	27
3.2 Acoustic analysis	29
3.2.1 Introduction	29
3.2.1.1 Acoustic correlates of vowels	29
3.2.1.2 Acoustic correlates of metaphonic adjustments	30
3.2.2 Recordings	30
3.2.3 Stimuli	31
3.2.4 Data analysis	32
3.3 Stressed vowels analysis	33
3.3.1 Men group	33
3.3.2 Women group	35
3.3.3 Mid-wowel analysis	36
3.3.4 Metaphonic context analysis	37
3.3.5 Metaphonic pattern at group-level	39
3.3.6 Single-subject analysis	40
3.3.7 Summary group and single-subject analyses	59
3.4 Final vowels	62
3.4.1 Men group	62
3.4.2 Women group	64
3.5 Comparsion superficial stressed vowel system and final vowel system	66
3.6 Comparison Tricase vowels with Standard Italian vowels and prototype vowels	67
3.6.1 Stressed vowels	67
3.6.2 Final vowels	68
Chapter 4 Phonological interpretation of the Tricase metaphony	71
4.1 Introduction	71
4.2 Metaphony in Italian varieties	71
4.2.1 Phonological accounts of metaphony	72
4.2.1.1 Metaphony in Southern-Salento dialects	73
4.2.1.2 Metaphony in Tricase dialect	74
4.2.2 Phonological analysis of the metaphonic variations shown by 11 Tricase speakers	76
4.2.2.1 Trigger vowels	76
4.2.2.2 Superficial stressed vowels	77
4.2.2.3 Metaphonic rules	78
4.2.3 Alternative accounts of metaphony: monovalent features	80

Contents	IX
Chapter 5 Behavioral discrimination	83
5.1 Introduction	83
5.2 Behavioral discrimination of the Tricase allophonic variation [ɛ-e]	84
5.2.1 Subjects	84
5.2.2 Stimuli	85
5.2.3 Test procedure and data analysis	85
5.2.4 Results	86
5.2.5 Discussion	88
Chapter 6 ERPs experiment	91
6.1 Introduction	91
6.2 Rationale of the study	91
6.2.1 Subjects	92
6.2.2 Stimuli	92
6.2.3 Experimental design	93
6.2.4 ERPs recording	94
6.2.5 Off-line signal processing	95
6.3 N100 component analysis	95
6.3.1 Off-line data processing	95
6.3.2 Amplitude analysis	97
6.3.3 Latency analysis	98
6.3.4 Topographic analysis	99
6.3.5 Discussion	100
6.4 MMN component analysis	101
6.4.1 Off-line data processing	101
6.4.2 Traditional MMN analysis	102
6.4.2.1 Amplitude analysis	104
6.4.2.2 Latency analysis	106
6.4.2.3 Topographic analysis	107
6.4.3 Identity MMN analysis	109
6.4.3.1 Amplitude analysis	110
6.4.3.2 Latency analysis	112
6.4.3.3 Topographic analysis	113
6.5 Discussion	114
6.5.1 MMN amplitude values correlate with direction of frequency change and distinctive feature specification	116
6.5.2 MMN latency values correlate with phonological status	117
Conclusions	119
References	123
